NOT ENOUGH BANDWIDTH

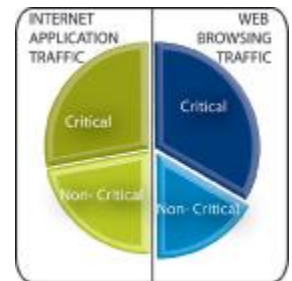

How do you know if you have enough bandwidth if you don't know what your Internet connection's being used for? With our solution we'll identify what users are doing online and how application traffic is generated. We'll also set policies to prioritize mission-critical traffic.

NO CONTROL OVER WEB CONTENT

Are your users complying with your company's Internet Usage Policies? Make sure you're controlling all web content. Our solution looks at packet payloads and stops detrimental traffic - even if it's secure.

SLOW INTERNET APPLICATIONS

If you're only looking at content, you're only seeing half the picture and only solving half the problem. Our approach prioritizes bandwidth for each of your applications so you can be sure your mission critical applications have all the resources they need.

Our Internet Monitoring, Security and Performance (IMSP) Service Solves Your Internet Issues

Improves Performance

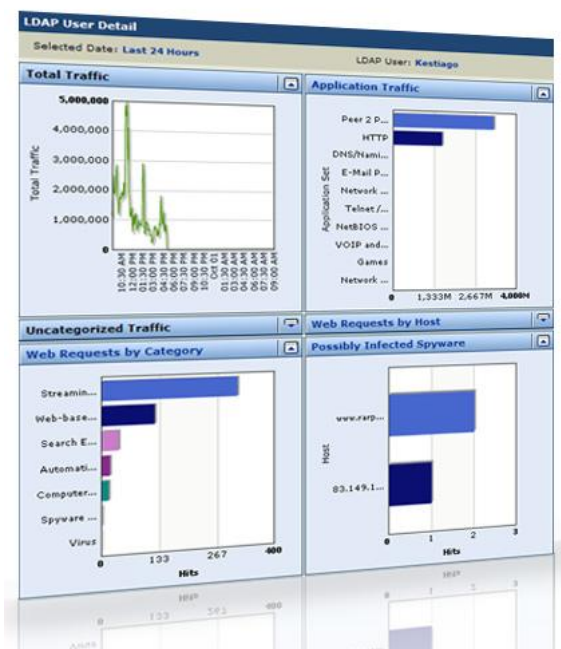

- Prioritizes bandwidth for mission critical applications
- Prioritizes mission-critical websites so that they always have the bandwidth they need
- Filters non-critical applications and websites so they can't impact performance
- Monitors user activity to ensure your Internet connection is being used appropriately

Controls Content

- Filters web content dynamically without introducing any noticeable latency
- Stops users from bypassing filters with anonymous proxies
- Blocks spyware downloads

Delivers Visibility

- Sends usage reports to management
- Uses real-time reporting tools to make network diagnosis easy
